Deepak Omkar

Bengaluru, Karnataka | deepak.omkar1234@gmail.com | +91-9353965892 | linkedin.com/in/deepak-omkar

Professional Summary

Motivated Computer Science Engineering graduate with a strong foundation in Python, SQL, and Java. Skilled in building academic projects, including CRUD-based systems and full-stack web applications. Seeking an opportunity to apply programming knowledge, contribute to impactful projects, and grow as a software engineer.

Skills

Languages: Python, Java, JavaScript
Web Technologies: HTML, CSS, Node.js, Express.js, REST API's
Libraries & Developer Tools: Postman, Flask, GitHub
Core CS Concepts: Data Structures & Algorithms, Object-Oriented Programming, Machine Learning
Technical Knowledge: Operating Systems, Computer Networks, SQL ,Cloud Computing (AWS)

Projects

API Sentinel | API Reliability & Developer Platform

- Built a full-stack platform to create, manage, and test API's with secure API key authentication.
- Developed an API Usage Console that allows users to select a created API, send real requests, and instantly view API key status, HTTP status, response time, and API health.
- Implemented API health tracking using uptime, latency, error rate, timeout rate, and reliability score. Built REST API's using Node.js and Express.js and designed a MySQL database for users, API's, API keys, requests, and health records.
- Added request history, error tracking, and incident detection to help developers identify API problems quickly.
- Developed and integrated backend services with MySQL to support API management, authentication, request tracking, and health monitoring.

AI-Based Medical Chatbot | Symptom Analysis and Health Guidance

- Developed a full-stack medical assistant web application with a responsive web interface connected to a Python Flask backend through REST APIs, enabling real-time processing of symptom inputs and delivery of structured health guidance.
- Designed secure API communication between the web client and Flask server for reliable real-time data exchange.
- Enhanced user experience with dynamic UI updates and structured medical guidance responses.
- Designed follow-up questioning logic that adapts based on prior user responses, progressively narrowing possible conditions across turns rather than collecting all symptoms upfront in a static, form-like flow.
- Conducted testing with various symptom datasets to evaluate prediction accuracy and system stability.

YouTube Comment Analyzer | Automated Audience Feedback Analyzer

- Developed a full-stack web application using a responsive web interface and Python Flask backend, allowing users to receive a structured analysis of audience feedback. where users submit a YouTube link and receive a structured breakdown of audience sentiment, segmented into Praise, Criticism, Questions, and Suggestions rather than a generic score.
- Implemented sentiment classification (Positive/Negative/Neutral) using machine learning models such as Naive Bayes and Logistic Regression.
- Integrated spam filtering to ignore irrelevant inputs such as numbers and random characters.
- Visualized audience sentiment distribution using real-time graphs for quick feedback analysis.
- Designed the backend using Flask (REST APIs) and the frontend with a responsive UI for seamless user interaction.

Certifications

AWS Cloud Quest: Cloud Practitioner – (2025) | Amazon Web Services Badge: Learned fundamentals of cloud computing, AWS services, and cloud deployment.

Education

BITM, Ballari, Karnataka **Aug 2022 – July 2026**
B.E. – Computer Science and Engineering, CGPA: 8.13/10
